

## The Girder-Slab License Fee

The Girder-Slab System technology can add significant value to a project offering;

- Low Floor to Floor Heights
- Speed of Erection
- Competitive bidding from numerous precast and steel providers
- Minimum schedule impact from cold weather
- Possibly lighter weight foundations

For budgeting purposes the design team should assume a license fee of \$1.00 per SF, of total floor area. Project specifics will control the actual fee. This fee will be incorporated and part of competitive proposals from your structural steel contractors.

For a complete list of all Girder-Slab System benefits please read the [Structural System Selector Guide](#) on the Design Team Resources page.
